

Example migrations (add/remove/update)

When running migrations through Visual Studio, open the **Package Manager Console** and set the **Default project** to **src\Infrastructure\Harmony.Persistence**.

```
Add-Migration Initial -Context HarmonyContext -StartupProject Harmony.Server -v
```

```
Remove-Migration PostCommentsInitial -Context HarmonyContext -StartupProject  
Harmony.Server -v
```

```
Update-Database -Context HarmonyContext -StartupProject Harmony.Server -v
```

```
dotnet ef database update --context HarmonyContext --startup-project  
"../../Web/Harmony/Server/Harmony.Server.csproj"
```
